[Contractually-obligated Testing](#)

- 
- (ii) The Code of Practice for the Electricity (Wiring) Regulations (COP)
  - (iii) IEC 60364 “Electrical Installations of Building”
  - (iv) Electricity supply rules of the relevant power supply companies

### 3.3 Statutory Test and Inspection

The statutory test and inspection herein stated in this T&C procedure shall refer to the Regulations Nos. 19, 20, 21 and 22 of the Electricity (Wiring) Regulations under the Electricity Ordinance Chapter 406E.

### 3.4 Functional Performance Tests

The purpose of functional performance tests is to demonstrate that the equipment/installation can meet the functional and performance requirements as specified in the General/Particular Specifications. Functional performance test should proceed from the testing of individual components to the testing of different systems in the installation.

The Contractor may have to make temporary modifications as the test proceeds. The specific tests required and the order of tests will vary depending on the type and size of systems, number of systems, sequence of construction, interface with other installations, relationship with the building elements and other specific requirements as indicated in the General/Particular Specifications. The testing of systems may have to be carried out in stages depending on the progress of work or as proposed by the Contractor.

Part of the tests may be required to be carried out in suppliers’ premises in accordance with the provisions in the General/Particular Specification.

Any performance deficiencies revealed during the functional performance tests must be evaluated to determine the cause and whether they are part of the contractual obligations. After completion of the necessary corrective measures, the Contractor shall repeat the tests.

If any test cannot be completed because of circumstances that are beyond the control of the Contractor, it shall be properly documented and reported to the PBSE, who shall then liaise with the relevant parties to resolve the situation. The Contractor shall resume his testing work immediately upon the attainment of a suitable testing environment.

### 3.5 Documentation and Deliverables

The Contractor shall submit his proposed T&C procedures together with the Testing and Commissioning Progress Chart shown in Annex I to Annex IV, where applicable, to PBSE for approval.

All inspection and T&C results shall be recorded by the Contractor in the appropriate test record forms, the reference of which is shown against each individual test. Sample of these forms can be found in Annex I and Annex III.
